Patient Mary Collins (DOB: 04/12/1958, MRN: 882731) was administered the incorrect evening insulin dosage during the 7 PM medication pass in Ward C. The assigned nurse noticed abnormal glucose readings approximately 45 minutes later and notified the attending physician. Patient reported dizziness and mild confusion but is currently stable and under observation. Preliminary review suggests the medication administration record displayed outdated dosage instructions after a chart update earlier in the afternoon. Pharmacy and nursing supervisor have been informed. Further review needed to determine whether additional patients may have
